Veriforce knows safety training is critical to improving safety culture, but can be costly and time-consuming for companies and their contractors. Our Safety Computer-Based Training (CBT) Library represents an efficient, cost-effective, and defensible solution to help improve employees’ safety awareness and satisfy training requirements found in federal OSHA general industry and construction standards. With 80+ safety courses in English and Spanish, the Safety CBT Library helps ensure workers have the required knowledge and skills to safely do their jobs.

VeriSource Safety CBT Library enables companies to:

**Efficiently and cost-effectively deliver required safety training**
- Courses can be viewed on-demand, 24/7, making it easy and cost-effective to provide OSHA-required safety training to individuals in geographically-dispersed locations and minimizing the need for costly travel by trainers, subject matter experts, or trainees
- Courses can be delivered to employees through VeriSource, or within the client’s own enterprise learning management system (LMS) using the AICC e-learning integration protocol
- Using the Safety CBT Library frees clients from having to develop safety training content on their own, saving time and money

**Maximize workforce engagement in safety training to improve employees’ safety awareness**
- We develop and maintain our course content through interviews with subject matter experts, job-task analysis, site visits, and other research, so clients can be confident that our courses always reflect the latest industry developments, technologies, and regulatory requirements
- Courses are available in both English and Spanish to meet the needs of a diverse workforce
- Courses are interactive, incorporating elements such as simulations and knowledge checks, as well as a final exam to help ensure trainee engagement and comprehension

**Simplify training recordkeeping and capture a defensible history of compliance with OSHA training requirements**
- All course results are automatically captured in VeriSource, eliminating time-consuming manual tracking activities, and can even be shared with enterprise HR or learning management systems via a systems integration
- Safety CBT courses can be used in conjunction with VeriSource Training Management or a client's own enterprise LMS, allowing a client to assign courses to employees and easily monitor and track trainees’ progress

See reverse side for a full list of courses included in the Safety CBT Library
## VeriSource Safety CBT Library Courses

All courses available in English and Spanish
