

Safety Compliance Solution

Leading companies recognize that a strong contractor safety compliance solution goes beyond prequalification, providing visibility into the actual implementation of contractors' safety programs and tools that help contractors continuously improve. These ingredients are critical to preventing injuries, protecting company reputation, supporting regulatory compliance, and avoiding unnecessary loss. Veriforce uniquely combines software and audit services to help companies not only streamline contractor prequalification, but also drive ongoing improvement to contractor safety and more effectively mitigate third-party and supply chain risk.

Streamlined program administration and accelerated contractor time-to-work

Deeper insight into program quality, improving hiring decisions and lowering risk

Expert guidance and corrective action follow-up that drive ongoing safety improvement

Flexible, Intuitive Technology to Streamline Prequalification

VeriSource™ Safety Compliance Management provides:

- Real-time visibility into each contractor's status in your safety program and a clear view of any reasons behind non-compliance
- A central, web-based repository to easily access all contractor safety program details – stats, policies, documents, and Veriforce audit reports – and internally share feedback about a contractor
- Safety Actions and Action Badges that highlight any incomplete tasks, which streamlines your program management and, in the contractor's view, ensures they know exactly what must be completed to get compliant
- KPI (Key Performance Indicator) graphs that allow you to efficiently monitor your program, understand contractor safety trends, and dig into underlying details
- Maximum client-side configuration flexibility, with the ability to group contractors and tailor their requirements and scoring based on perceived risk or other criteria
- An integrated COI Tracking option, giving you a one-stop view of contractor status across both safety and insurance prequalification requirements
- The ability to securely share key contractor data – such as overall safety score or safety audit scores – by integrating with procurement, ERP, risk management, or other enterprise systems, enabling a more complete view of vendor relationships and risk without having to access multiple systems

“The interface makes it very easy to understand what I need to do to meet client requirements.”

– Steve Clemons,
US Valve Services & Training

“The software is very simple and easy to use.”

– Stepynie Gallier,
Primoris Coastal Field Services

Expertise That Delivers Greater Insight and Improvement

- Review of contractors' safety policies by our in-house team of trained safety professionals – not a computer algorithm – results in a better assessment of the quality of a contractor's program
- Higher-risk contractors can be required to undergo a Desktop and/or Field Audit by a Veriforce safety professional, who verifies the implementation of a contractor's safety program through a review of records and/or onsite inspection
- Audit findings are visible in VeriSource, giving you deeper insight into the quality of a contractor's day-to-day program implementation so you can make better hiring decisions and lower your risk
- When Veriforce finds a gap in your contractors' policies or program implementation, we assist with guidance and corrective action plans that result in real improvements

“With VeriSource, we've been able to manage contractor prequalification more efficiently and gain tight control over contractor selection by our team in the field. And Veriforce contractor safety audits have given us more eyes in the field to help identify safety gaps among our contractors and ensure they take corrective action.”

– Sam Holliday,
Southern Star Central Gas Pipeline
